RESULTS

Species..... **Tourmaline**
 Geographic Origin **Brazil**

TREATMENT (Scan QR code for more information)

No indications of heating
 Clarity Enhanced

Item Description: **One loose stone**

Weight: **1.71 carats**

Measurements: **8.05 x 5.82 x 3.72 mm**

Comments: The greenish blue portion of this tourmaline contains copper and manganese and may be called "paraíba tourmaline" in the trade. The name "paraíba" comes from the Brazilian locality where this gem was first mined, however today it may come from several localities.

The violet portion of this tourmaline is not consistent with what is called "paraíba tourmaline" in the trade.

Any statement on geographic origin is an expert opinion based on a collection of observations and analytical data.

Image is approximate

FACSIMILE This is a digital representation of the original GIA Report. This representation might not be accepted in lieu of the original GIA Report in certain circumstances. The original GIA Report includes certain security features which are not reproducible on this facsimile.
